

Wireless Printer Setup

Ethernet Installation Guide for HP printers

1. Firstly, make sure you have an Ethernet cable to assist with your printer model.
2. Make sure you choose the Wired Network or Ethernet option when choosing the link type during installation.
3. Therefore, now you need:
 - a. A router for the network.
 - b. If the router doesn't have any free ports, a switch or hub with usable Ethernet ports is necessary.
4. Ethernet ports are connected to the printer and the router.
5. The link between your printer and your network router will be created.

Installation of HP Printer Link Using USB Cable

1. The USB cable ports used to connect the USB cable or Ethernet cable to your device or network router are supported.
2. One built-in Ethernet port links most of the computers to a wired network.
3. The USB or Ethernet cables that you connect to your phone are different from the ones you use.
4. Attach both a USB cable port into your printer and a USB cable port into your device.
5. Now, obey the on-screen instructions and instal the driver programme for the HP printer.
